

**Q. Why Do White Kitchens Stand the Test of Time?**

**A.** White cabinetry, a classic choice, is timeless and can morph into any style. It reflects light and can make even a small kitchen feel spacious. White is versatile and can easily work with different surrounding materials. It's clean and fresh! A favorite paint color can add a personalized backdrop (walls) to this popular neutral!

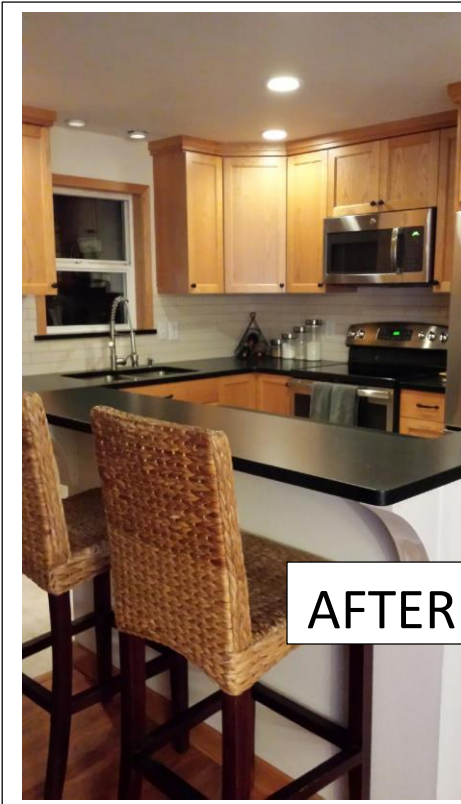

*"See, it really pays to leave it to the professionals!! We are very happy with everything!!" Sandra W., Woodinville*

# KITCHEN TRENDS 2015

BEFORE

AFTER

**OPEN Floor Plan:** Wall removal can create a great room combining two highly-used rooms into one.

**LED Lighting (light-emitting diodes):** Bulbs can last up to 20 years; they stay cool and are dimmable.

**Vertical Storage:** Tray dividers and spice pullouts make thinner or smaller items easily visible and accessible.

**Charging Station:** Additional outlets in a drawer, appliance garage or hidden in a cabinet are more popular for all the residents' electronics.

**Trash and Recycling Pullout:** This is a great accessory to hide trash and recycling in a cabinet that once was a freestanding container or located under the sink.

**Floor-to-Ceiling Cabinetry:** More cabinetry is desired storage and can make a room feel taller.

**Furniture-Looking Cabinetry:** Perhaps an influence or a return to this country's early-1900s notions, many of today's kitchens are assigning furniture duties to cabinetry. Some pieces emulate the look of china hutches with embellishments commonly seen in furniture.
